

CORN

STACKED TRAITS STACK BENEFITS

Now you can benefit from a combination of corn technologies with stacked-trait hybrids. Simply choose hybrids that combine Roundup Ready Corn 2 with YieldGard Corn Borer, YieldGard Rootworm or YieldGard Plus.

ROUNDUP READY CORN 2 SYSTEM—OUTSTANDING CROP SAFETY

Whether you follow a pre- and postemergent program or only spray postemergence, Roundup Ready Corn 2 fits your system. Engineered to work with Roundup agricultural herbicides, the Roundup Ready Corn 2 System can give you outstanding yield potential without the crop injury other post herbicides can cause—and that can add \$12 per acre to your bottom line.

YIELDGARD CORN BORER—STALK PROTECTION

YieldGard Corn Borer protects the corn plant from the inside out, so you get healthier stalks. It allows the corn plant to maximize the amount of moisture and nutrients carried up through the stalk to the ear.

YIELDGARD ROOTWORM—ROOT PROTECTION

YieldGard Rootworm protects roots from the inside out so you can get fuller roots, which maximizes the amount of moisture and nutrients that are absorbed by the plant.

YIELDGARD PLUS—WHOLE-PLANT PROTECTION

YieldGard Plus protects the entire corn plant from the inside out, so you get fuller roots and healthier stalks. This system maximizes the amount of moisture and nutrients that is absorbed and carried up through the plant to the ear.
